Document 1: JP 59-126327 A (Nippon Technical Kabushiki Kaisha), 20 July 1984, entire text; fig. 1

Claims 1 to 7

A variable tuning antenna wherein a tuning circuit which is serially connected to a radiating element comprises a first inductance element, and a parallel circuit which connects a second inductance element to a varactor in parallel, and said antenna is formed so as to be capable of tuning to a desired frequency band by varying the capacity of the varactor, is not disclosed in any of the documents cited in the international search report, and would not be obvious to a person skilled in the art.

Document 1 (particularly page 1, lower right column, line 18 to page 2, upper right column, line 19) indicates that "antenna tuning circuit (i) comprises inductance (L) and a capacitive circuit (C). The aforementioned capacitive circuit (C) comprises a parallel circuit linking a fixed capacitor (1) and two variable capacity diodes (2a, 2b), and this circuit and the next-stage high-frequency amplifier stage (ro) are inductively coupled via a variable inductance (3) varied in response

to a push-button device, for example" (page 1, lower right column, line 18 to page 2, upper left column, line 5), therefore a tuning circuit which is serially connected to a radiating element comprises a first inductance element and a parallel circuit which connects a second inductance element to a varactor in parallel, and said antenna is formed so as to be capable of tuning to a desired frequency band by varying the variable inductance, however said antenna does not tune to a desired frequency band by varying the capacity of a variable capacity diode, but merely matches impedance.
